## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Information Disclosure Statement*

2. The information disclosure statement (IDS) submitted on 2/10/2006 complies with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 10-16 rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi (4,086,471).

With respect to claim 10, Takahashi shows in figure 1 a reference source (ENGINE REFERENCE PULSE), program-controlled calculation means (1, 2, 3) and a pulse generation circuit (4). The entered parameters are the ENGINE PARAMETER inputs to the OPTIMUM IGNITION ANGLE DECISION DEVICE 1. It is inherent that the ENGINE PARAMETER inputs are value pair with size and type as recited in the claim. Figures 2A and 2B show that the definition of a pulse is different during different processing cycles with respect to different ENGINE PARAMETER inputs during

Art Unit: 2837

different processing cycle of the engine. Takahashi discloses at column 1 line 67 to column 2 line 3 that the ignition angle determination device stored the results of an engine test in the form of a numerical data table or numerical formular. It is inherent that the parameter data table stored the size and type values of the engine as recited in the claim.

With respect to claims 11-16, Takahashi shows in figures 2A and 2B the pulses comprising two parameters  $T_{PR}$  and  $90^\circ$ . It is inherent that the pulses can represent different values such as two angular values or two time values as recited in the claims.

#### ***Citation of Pertinent References***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the PTO form 892 are pulse generating circuits for controlling vehicle engines.
